Transcript

Playing with types and initialization in Learn to Code. So I just tried to play with different ways and functions to shorten the commands even if it took me a little longer to code it out. I liked the way it looked and it felt good. It kind of gave me some insight into some of the ways that Swift actually works where some of these commands have a simple word on top, but then a much deeper meaning underneath that you don't really see and get to. So it's kind of cool. So here I've taken some functions and created some easier commands that don't need as much to do and I can just say what I mean. So this is where I've gotten today and just working through Learn to Code 2.
