Did the Camera Assembly today. So playing with classes and getting more into how to build things and then be able to send code around and play with them more and just make it more my own. And so that was a lot of fun getting to see what that's like from the student side and seeing this activity. What I really liked is that it didn't require you to totally go out on your own but gave you the option. And you could use their suggestions, which I can see a lot of people needing to start with that before they get going too deep, but if you want to jump in, you had that as well. So it was really cool.
