

## Transcript

So I'm going to venture off the beaten path. Today I'm gonna go out and create my own playground. years ago, I played with a simulator that did predator prey relationships. And it's a lot like Blink. So kind of gives me somewhere to start and something I was thinking about. So what I'm going to do for the next couple days, or however long it takes, go through that journey of trying to put this together. So here's where I started from.

I jumped into one of my favorite apps, Numbers, and just wrote down things that I know about what I want to do and what I need to know, what I need to go figure out. It's what I tell my students to do. So I thought it'd be a great place for me to start. And then I kind of drew out what I wanted. I don't draw very well, so I decided I was going to grab some emoji instead to use for that. And then I started making plans. So I decided to just play with Blink and see what is there that I can mess with. I did a little experimenting with shared code to see if I could put in my own piece of code. So I wrote in "does this show up" and it popped up on all of the other pages. So that was one question down. And since Blink already has a grid created, I was just going to see if I could stay on the top level stuff and mess with it. So I made a new public function and wanted to see if I could call it up. And that worked. So that's about where I'm at. I just did some playing to see what I've got to work with. And I'm gonna do some more tomorrow.
