

Hey, I'd like to talk about, at this moment some of the things that had caused some changes with implementing, this plan the way I originally envisioned and what was going on. Not necessarily to get into what those impacts were but just what had happened. So along the way, you know, life happens, things will go on the first part of the phase went well. Around phase two, we ended up with the teacher I was working, with the main teacher I was working with at that point, ended up going on maternity leave early. That threw a wrench in the works to change some things and make me have to rework who I was working with and when. I had some other teachers set up for later in the year that we were going to try to work with. And along this point here into phase three and four, the district started, To renew their iPad initiative. we were working on that, but that had highlighted some deficiencies in our district's PL focus with implementing the iPads well with the teachers and doing the professional learning. I ended up having a big role in that. So that changed a lot of the PL work I was doing. So instead of the computational thinking, I was moving it and switching things around there. So I was doing some new PL that I wasn't really planning on doing. About this same point in here, our education pathway teacher had moved. Her spouse had gotten a new job in new location and they had to move all of a sudden unexpectedly at the end of the semester. So we got a new teacher. So working with her at that moment, since this was her first assignment, she was just straight out, starting in the spring semester, just fresh out of teacher training. So this was her very first assignment. So we're working to change that dynamic. Then about the time we're going to start working with her again, there was some medical issues that came up that were just, you know, hey, life happens. And so we had to, working with that pathway, again, we're putting that on hold at the moment. Because, you know, that's life. And we're working with that and working through that. So those were some of the big changes that happened that caused me to tweak some things. Something else came along over the summer, that changed up some of the work I was doing with the district and changed who I was working with at the time. And that was our community engagement initiative that I was working with. We started actually doing a lot of work, working with coding with teachers and implementing that. And so we were doing some coding initiatives helping schools put in coding into their classes, k-12, and really implementing them in a strong and informative way. So I was starting to do some other work, had some other things that had come onto my plate and working with teachers in a totally new role that I hadn't anticipated happening before. So this was something that had happened as well.
